SEPARATE CONTROL TESTING LEDGER • EVOLVING VOLATILITY OVERRIDE (EVO)

EVO Fail-Safe Audit & Derivative Failure Remediation Ledger

Audit Timestamp: November 10, 2026 • Target Host: OrigamiNeoBookProArchitextSlaveMatrix • Classification: C5

> **EVO Control Mandate:** Every derivative failure observed across document packaging, script string escaping, and interactive macOS Zsh execution is logged independently from court evidentiary ledgers and locked behind pre-flight verification gates.

1. Master Failure & Remediation Registry (FAIL-001 Through FAIL-008)

ID	Subsystem	Identified Failure	EVO Countermeasure	Status
FAIL-001	Audio Script v1	Unescaped newline literals inside embedded Python block	List-joined string assembly and syntax check	OVERRIDDEN
FAIL-002	Visual Exhibits	Filename mismatch omitted embedded screenshot images	Exact Unicode filename binding on all four visual exhibits	OVERRIDDEN
FAIL-003	Federal Record	Initial 3-page pleading omitted structured federal index	Integrated full 23-document federal docket index	OVERRIDDEN
FAIL-004	Clickable Links	Non-clickable file references replaced downloadable cards	Unified clickable PDF deliverables emitted directly	OVERRIDDEN
FAIL-005	Workspace Seed	Deferred Neo Vault and Antigravity bootstrap script	Delivered standalone self-extracting installer	OVERRIDDEN
FAIL-006	Interactive Zsh	Default Zsh rejected # comments and split & into job 61390	Added setopt interactivecomments and removed # lines	OVERRIDDEN
FAIL-007	Zsh Glob Parser	Parenthetical comment (Zero...) triggered attribute Z error	Eliminated bare parentheses from terminal paste blocks	OVERRIDDEN
FAIL-008	Downloads Path	Assumed files existed in ~/Downloads before mkdir -p ran	Self-extracting heredoc builds directories inline first	OVERRIDDEN

2. Mandatory EVO Pre-Flight Control Gates

- **Gate A (Interactive Zsh Immunity):** All terminal paste sequences issued for **OrigamiNeoBookProArchitextSlaveMatrix** begin with **setopt interactivecomments** and contain zero unquoted ampersands, zero parenthetical prose, and zero reliance on pre-staged browser download filenames.
- **Gate B (Directory-First Atomic Creation):** Every file placement routine executes **mkdir -p "$SCRIPTS_NEO"** prior to writing or moving any script or ledger, eliminating cascading
